PROFESSIONAL PROFILE

Early-career computational biologist with experience supporting clinical genomics workflows and developing computational biology projects focused on genome annotation, biodiversity informatics, and biomedical data visualization. Currently pursuing an M.S. in Bioinformatics while building reproducible workflows and interactive tools that make complex biological data more accessible.

FEATURED PROJECTS

EcoScope *July 2026*
Technologies: Python • GBIF API • Folium
Investigated changes in indicator species distributions using ten years of GBIF biodiversity observations (2016–2026) from the Key Largo conservation area. Developed an interactive geospatial visualization to explore biodiversity trends and potential climate-related changes.

CFDE Data Visualization Challenge *June 2026*
Technologies: Python • Streamlit • Plotly • HuBMAP
Built an interactive Streamlit application visualizing HuBMAP lymph node tissue in three-dimensional space using cell cluster assignments and cellular coordinates to explore spatial organization.

Genome Annotation Pipeline *May 2026*
Technologies: Python • SQL • Linux • BLAST • HMMER • TMHMM
Developed a reproducible genome annotation workflow integrating BLAST, HMMER, and TMHMM to identify and annotate putative proteins. Automated annotation processing using Python, SQL, and Linux-based workflows.

CURRENT ACTIVITIES

- CFDE DeCoDE Institute Capstone Project
- Hack Your Summer Challenge
- Ebolathon (2026)
- M.S. Bioinformatics, University of Maryland Global Campus

EXPERIENCE

GeneDx
Genetic Counseling Assistant *July 2025 – Present*
- Review and validate 250+ genetic testing accessions weekly across WES, WGS, and reanalysis workflows.
- Built a QC checklist that cut recurring processing errors by ~50%.
- Work across multiple testing queues, including WES, WGS, chromosomal microarray, mitochondrial, and repeat expansion.

TECHNICAL SKILLS

Programming: Python, SQL, R, Bash
Bioinformatics: BLAST, HMMER, TMHMM, Galaxy, NGS
Visualization: Streamlit, Plotly, Folium
Tools: Git, GitHub, Linux

EDUCATION

University of Maryland Global Campus *Expected 2028*
M.S. Bioinformatics

California State University, Long Beach
B.S. Biology
